- Consolidated data presentation
- Enables proactive business events
- Performance measuring tool (KPIs)

OneFit Accounting

One of the first integrated accounting systems to be installed on a micro computer formed the basis of the LOGMA accounting package, with a reputation for reliability and simplicity. This has now been developed to take advantage of the latest technologies and **OneFit Premier** can be implemented in the smallest of businesses whilst being upwardly scalable to suit larger organisations including multi-location, multi-company, multi currency and group control facilities.

LOGMA's consideration of operational and accountancy needs, with reference to industry and leading accountant's standards and expectations are met without imposing difficult or time consuming processes at user level. Flexible and innovative methods of data capture, using selectable modules of the **OneFit** software solution, can be fully integrated. Access to a shared database enables authorised, mid and senior managers to access information as and when required. Standard BI (Business Intelligence) tools or **OneFit LID**, (Logma's Integration Dashboard) can be used as data presentation and analysis tools. Operators, accountants and auditors find **OneFit Premier** accounting quick and easy to use and understand.

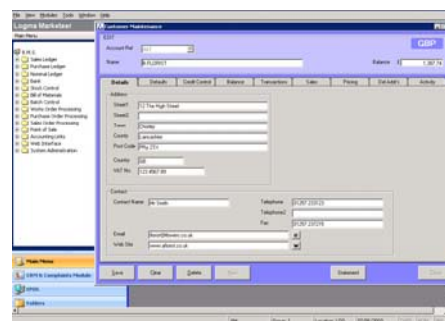

Two levels of **OneFit Premier**;

Functions of Premier 1

- Sales, purchase and Nominal Ledger Control.
- Product File
- Quotes
- Invoicing
- Financial Reporting to P & L and Balance Sheet level
- Built in critical KPIs (Key Performance Indicators)

Functions of OneFit Premier 2

- All functions of premier 1 plus;
- Sales & Purchase order processing
- Stock Control (Optional Batch Stock Control)
- Extended management Control, BI's and LID facilities providing high level management and performance measurement opportunities.**

Other Options

Financial Control – consolidated presentation of accounts and financial information drawn from departmental, company, multi-company and multi-location as required. Can include third party data when permitted.

Available Integrated OneFit Modules
